Abstract

The invention provides hair cosmetics which can suppress a frictional feeling of hair in running water during rinsing to improve softness and smoothness thereby preventing the hair from being damaged by twisting during rinsing, and comprises organopolysiloxane having an amino-modified organopolysiloxane chain and a polyoxyalkylene chain, and at least one cationic surfactant selected from compounds represented by formula (1) or (2):

$$\begin{bmatrix} R^{2} & 1 & 1 \\ R^{1} & N - R^{4} & X^{-} & 1 \end{bmatrix}^{+} X^{-}$$
 (1)

$$R^5 - N < \frac{R^6}{R^6}$$
 (2)

wherein at least one of R¹, R², R³ and R⁴ represents e.g. an alkyl group containing 8 to 35 carbon atoms in total, and the remainder represents a C1 to C5 alkyl group, hydroxyalkyl group etc., X⁻ represents a halogen ion or an organic anion, R⁵ represents e.g. an alkyl group containing 8 to 35 carbon atoms in total, and R⁶ represents a C1 to C22 alkyl group etc.
